DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-6, drawn to a composition comprising lithium and an agent, classified in class 530, subclass 399, for example.
 - II. Claims 7-9 and 22-24, drawn to a method for promoting axonal growth, classified in class 435, subclass 375, for example.
 - III. Claims 10-17, drawn to a method for treating injury by administration of lithium, classified in class 424, subclass 600, for example.
 - IV. Claims 18-21, drawn to a method for treating potential axonal growth, classified in class 514, subclass 913, for example.
 - V. Claims 25-26, drawn to a method for treatment by administration of a cell, classified in class 424, subclass 93.1, for example.
 - VI. Claims 27-28, drawn to a method for preventing neural cell degeneration, classified in class undetermined, subclass undetermined, for example.
 - VII. Claim 30, drawn to a method for treating neurodegenerative disorders by administration of an agent, classified in class undetermined, subclass undetermined, for example.
 - VIII. Claims 31-33, drawn to a method for treating sectioning of the spinal cord, classified in class undetermined, subclass undetermined, for example.

The inventions are distinct, each from the other because of the following reasons:

Art Unit: 1646

2. Inventions I and (II-V) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the composition of Group I comprising lithium and an agent could be used in an entirely different manner such as chemical compounds in their own right rather than in the methods of Groups II-V.
3. Inventions I and (VI-VIII) are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are not required one for the other in that the composition of Group I is not required for the methods of Groups VI-VIII.
4. Inventions II to VIII are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions are directed to different methods that recite structurally and functionally distinct elements, are not required one for the other, achieve different goals, and therefore constitute patentably distinct inventions.
5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, recognized divergent subject matter and non-coextensive literature searches, restriction for examination purposes as indicated is proper.

Art Unit: 1646

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. In case Group I or Group III is elected, this application contains claims directed to the following patentably distinct species of the claimed invention: different agents specifically listed in claims 2 and 14.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 13 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission

may be used in a rejection under 35 U.S.C. 103(a) of the other invention. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Olga N. Chernyshev whose telephone number is (703) 305-1003. The examiner can normally be reached on Monday to Friday 9 AM to 5 PM ET.
